1 Courses: State of the art in interactive ray tracing

Peter Shirley

July 2006 **Material presented at the ACM SIGGRAPH 2006 conference SIGGRAPH '06**

Publisher: ACM Press

Full text available: 📄 pdf(14.08 MB)   Additional Information: full citation, abstract

> Recent improvements in computer hardware have allowed ray tracing to be used in some interactive applications. The trends in architecture and expansions of geometric model should increase the use of interactive ray tracing. This course presents recent and often not-yet published work on interactive ray tracing.

2 Software safety: why, what, and how

Nancy G. Leveson

June 1986 **ACM Computing Surveys (CSUR)**, Volume 18 Issue 2

Publisher: ACM Press

Full text available: 📄 pdf(4.18 MB)   Additional Information: full citation, abstract, references, citings, index terms, review

> Software safety issues become important when computers are used to control real-time, safety-critical processes. This survey attempts to explain why there is a problem, what the problem is, and what is known about how to solve it. Since this is a relatively new software research area, emphasis is placed on delineating the outstanding issues and research topics.

3 Level set and PDE methods for computer graphics

David Breen, Ron Fedkiw, Ken Museth, Stanley Osher, Guillermo Sapiro, Ross Whitaker

August 2004 **ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04**

Publisher: ACM Press

Full text available: 📄 pdf(17.07 MB)   Additional Information: full citation, abstract, citings

> Level set methods, an important class of partial differential equation (PDE) methods, define dynamic surfaces implicitly as the level set (iso-surface) of a sampled, evolving nD function. The course begins with preparatory material that introduces the concept of using partial differential equations to solve problems in computer graphics, geometric modeling and computer vision. This will include the structure and behavior of several different types of differential equations, e.g. the level set eq ...

4 Session 8: Topology preserving surface extraction using adaptive subdivision

Gokul Varadhan, Shankar Krishnan, TVN Sriram, Dinesh Manocha

July 2004 **Proceedings of the 2004 Eurographics/ACM SIGGRAPH symposium on Geometry processing SGP '04**

Publisher: ACM Press

Full text available: pdf(325.41 KB)   Additional Information: full citation, abstract, references, index terms

We address the problem of computing a topology preserving isosurface from a volumetric grid using Marching Cubes for geometry processing applications. We present a novel topology preserving subdivision algorithm to generate an adaptive volumetric grid. Our algorithm ensures that every grid cell satisfies two local geometric criteria: a complex cell criterion and a star-shaped criterion. We show that these two criteria are sufficient to ensure that the surface extracted from the grid using Marchi ...

6 Papers: A self-learning universal concept spotter
Tomek Strzalkowski, Jin Wang
August 1996 **Proceedings of the 16th conference on Computational linguistics - Volume 2**
Publisher: Association for Computational Linguistics
Full text available: pdf(589.28 KB)   Additional Information: full citation, abstract, references, citings

We describe the Universal Spotter, a system for identifying in-text references to entities of an arbitrary, user-specified type, such as people, organizations, equipment, products, materials, etc. Starting with some initial seed examples, and a training text corpus, the system generates rules that will find further concepts of the same type. The initial seed information is provided by the user in the form of a typical lexical context in which the entities to be spotted occur, e.g., "the name end ...

7 Illustrative risks to the public in the use of computer systems and related technology
Peter G. Neumann
January 1996 **ACM SIGSOFT Software Engineering Notes**, Volume 21 Issue 1
Publisher: ACM Press
Full text available: pdf(2.54 MB)   Additional Information: full citation

8 Image-driven simplification
Peter Lindstrom, Greg Turk
July 2000 **ACM Transactions on Graphics (TOG)**, Volume 19 Issue 3
Publisher: ACM Press
Full text available: pdf(1.98 MB)   Additional Information: full citation, abstract, references, citings, index terms

We introduce the notion of image-driven simplification, a framework that uses images to decide which portions of a model to simplify. This is a departure from approaches that make polygonal simplification decisions based on geometry. As with many methods, we use the edge collapse operator to make incremental changes to a model. Unique to our approach, however, is the use at comparisons between images of the original model against those of a simplified model to determine the ...

Many medium-access control (MAC) protocols for wireless networks proposed or implemented to date are based on collision-avoidance handshakes between sender and receiver. In the vast majority of these protocols, including the IEEE 802.11 standard, the handshake is sender initiated, in that the sender asks the receiver for permission to transmit using a short control packet, and transmits only after the receiver sends a short clear-to-send notification. We analyze the effect of making the collisio ...

Full text available: 📄 pdf(774.38 KB)   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>index terms</u>

We present a novel, generic framework and algorithm for hierarchical collision detection, which allows an application to balance speed and quality of the collision detection.We pursue an average-case approach that yields a numerical measure of the quality. This can either be specified by the simulation or interaction, or it can help to assess the result of the collision detection in a time-critical system.Conceptually, we consider sets of polygons during traversal and estimate probabilities that ...

18 <u>Modeling of collision avoidance protocols in single-channel multihop wireless networks</u>

Yu Wang, J. J. Garcia-Luna-Aceves

September 2004 **Wireless Networks**, Volume 10 Issue 5

Publisher: Kluwer Academic Publishers

Full text available: 📄 pdf(271.77 KB)   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>index terms</u>

Although there has been considerable work on the performance evaluation of collision avoidance schemes, most analytical work is confined to single-hop ad hoc networks or networks with very few hidden terminals. We present the first analytical model to derive the saturation throughput of collision avoidance protocols in multi-hop ad hoc networks with nodes randomly placed according to a two-dimensional Poisson distribution. We show that the sender-initiated collision-avoidance scheme achieves ...

19 Hierarchy schedule-sensing protocol for CDMA wireless data-centric networks with multiple packet collision and capture effect

Hsiao-Hwa Chen, Wee-Teck Tea

December 2004 **IEEE/ACM Transactions on Networking (TON)**, Volume 12 Issue 6

Publisher: IEEE Press

Full text available: pdf(905.47 KB)   Additional Information: full citation, abstract, references, index terms

> This paper focuses on performance analysis of a CDMA wireless data network based on hierarchy schedule-sensing (HSS) protocol, in which a common-code permission frame beacon is used to schedule request transmissions to avoid packet collisions. To further reduce scheduling delay, hierarchical group-based coding is adopted in the scheme. The performance of such a network is evaluated considering packet collisions with and without packet capture effect using a two-dimensional Markovian chain model. ...

> Longest Prefix Matching (LPM) is a fundamental part of various network processing tasks. Previously proposed approaches for LPM result in prohibitive cost and power dissipation (TCAMs) or in large memory requirements and long lookup latencies (tries), when considering future line-rates, table sizes and key lengths (e.g., IPv6). Hash-based approaches appear to be an excellent candidate for LPM with the possibility of low power, compact storage, and O(1) latencies. However, there are two key probl ...

Resource Type   Journal Article

Resource Relation   Journal of Solar Energy Engineering ; VOL. 118 ; ISSUE: 4 ; PBD: Nov 1996

Subject   17 WIND ENERGY ; WIND TURBINES; BIOLOGICAL EFFECTS; MATHEMATICAL MODELS; ROTORS; BIRDS; MORTALITY

Description/ Abstract   When a bird flies through the disk swept out by the blades of a wind turbine rotor, the probability of collision depends on the motions and dimensions of the bird and the blades. The collision model in this paper predicts the probability for birds that glide upwind, downwind, an across the wind past simple one-dimensional blades represented by straight lines, and upwind and downwind past more realistic three-dimensional blades with chord and twist. Probabilities vary over the surface of the disk, and in most cases, the tip of the blade is less likely to collide with a bird than parts of the blade nearer the hub. The mean probability may be found by integration over the disk area. The collision model identifies the rotor characteristics that could be altered to make turbines safer for birds.
